Master of Science in Information Assurance (MSIA)

The goal of the MSIA program is to provide instruction in how information assurance will reduce vulnerability in our national information infrastructure and business environment. Students will leave the MSIA program with an understanding of the physical, operational and technical knowledge necessary to protect business technology and data assets along with knowledge of how to manage security programs in today’s global business climate.

LEARNING OUTCOMES

1. Students will be able to define how a business technology problem impacts business.

2. Students will be able to explain information assurance concepts.

DIRECT MEASURES

1. Course project in IA 510.
2. Project in capstone course IA 590.
3. Technical lab report

INDIRECT MEASURES

1. Graduate Exit Survey
2. Alumni Survey
